

Presentation BVM School Learning Resource Room

A new learning program is being added to Presentation BVM School. This September a Learning Resource Room designed to enable students with special learning needs to meet with academic success will be opening in our school.

Children who qualify for the program, based on specific criteria, are eligible for Language Arts and /or Math support. Students with average to above average ability with current Pyscho-educational testing, supporting Terra Nova results, and teacher recommendation will be considered for the program.

Many of these students are presently receiving some services from the MCIU. This program, taught by Mrs. Kim Szypula, will complement the Presentation BVM School curriculum and the IU remedial program. This month the teachers will make student recommendations. Parents will be notified in the fall if their child is accepted into the program.
